

AIR 554 / 554B / 554C

Large Forklifts

The KAB 554B is an air suspension seat that incorporates several unique features that are not common to other seats in the KAB forklift range. These include: auto driver weight adjustment to ensure correct ride settings and therefore ensure optimum vibration absorption, and an adjustable pneumatic lumbar support for enhanced user comfort.

This seat is typically used in instances where the KAB 65K4 is too large to fit in the available cabin space.
